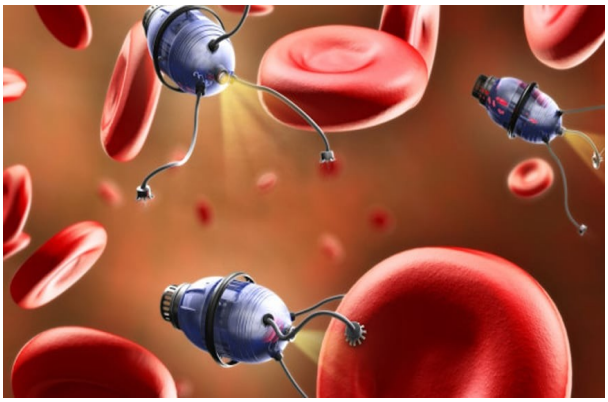
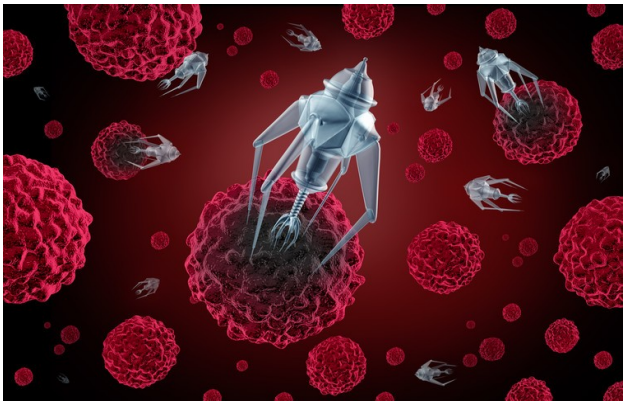
Applications

NOTE: *Image included are part of slide so you should carefully elaborate the caption and describe it. Also I will present other three applications of nanotechnology*

Medicals fields: Nano robots will be used for the exact treatment and delivery of drugs directly to diseased cells in our body.

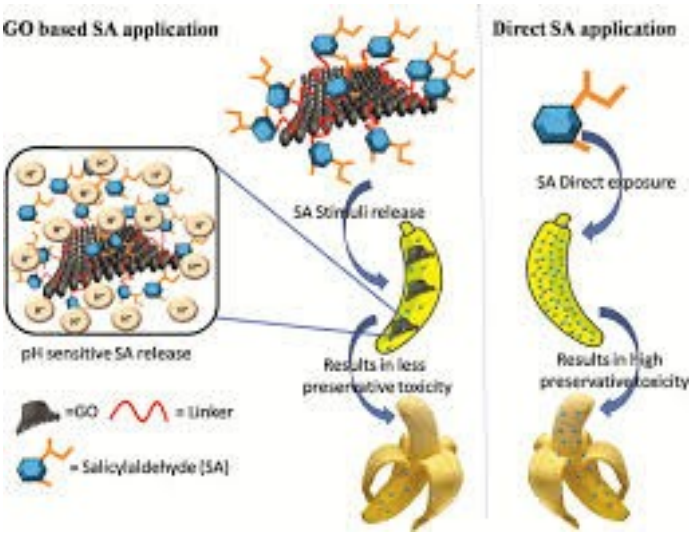


Drawing 2: This Image shows the dilivery of drugs in blood cell



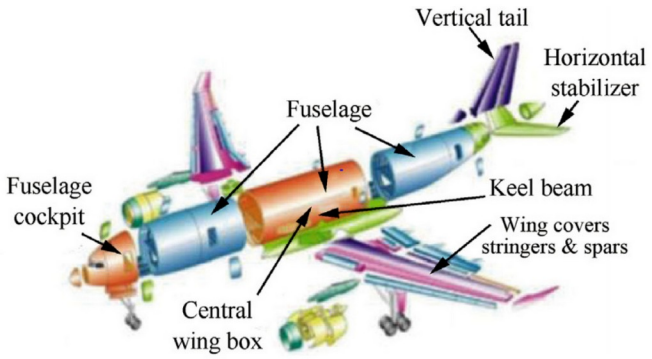
Drawing 1: This Image also shows the dilivery of drugs in blood cell

Food industry: Nano-technology is used to create the Silver of the packaging of food items, nano-materials are used for creating tastes of foods.



Drawing 3: I don't know what this is but I fount it in book so you can describe as use of nanotechnology in foods

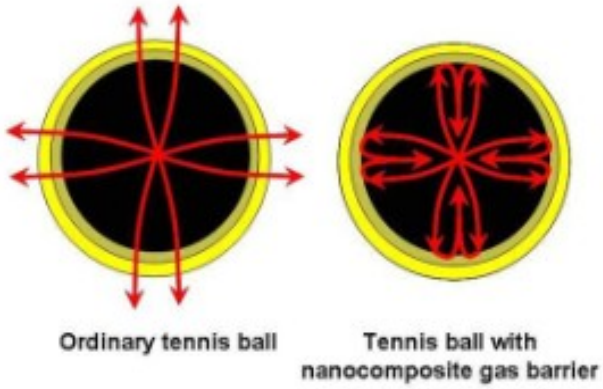
Heavy Industry: Nano-technology is used in Airplanes, Sewerage, Automotive industries and different cosmos related researches.



Drawing 5: This image is to show use of nanotechnology in aircraft

Drawing 4: This image is to show use of nano technology in space

Sports industry: Nano-tech can increase the efficiency of sports equipment's.



Drawing 7: This image shows ordinary tennis ball vs tennis ball with nanocomposite gas barrier whiich is afer for player

Drawing 6: This represents why nanotech in sports
